PROFILE

I spent fourteen years building software in C#/.NET and the last six coordinating the people who build it. Releases, change management, dependencies between teams, hiring. The technical years still pay off: I can question an estimate, read a broken pipeline myself, and say the same thing to engineers and to management without it changing meaning on the way.

- At LSEG I put out a release every three weeks for a global team of 15 to 20 people. No rollbacks. That meant owning the change records in ServiceNow, the GitHub pipelines and the approval chain.
- Moved that team's .NET workload from AWS to Azure with production staying up. The migration was the easy half. Sequencing the dependencies between teams was the work.
- Started a software team from nothing at Yokogawa: role profiles on the HAY and Dreyfus models, hiring, Azure DevOps and CI/CD.
- Scrum Master at LSEG, and at Yokogawa the one who introduced Agile to stakeholders who had never worked that way.
- Requirements, user stories, acceptance criteria, status reports upward. I have been the translator between business and engineering since 2011.
- Worked with Japanese, Dutch, German and American colleagues and clients. Ran Yokogawa's booth and workshops at the NAMUR Global Assembly in front of 500 people.
- I escalate early. Incomplete information is normal, and I would rather raise a risk that turns out to be nothing.

CORE SKILLS

Delivery & Process	Agile / Scrum (Scrum Master), Release & Deployment Governance, Change Management, Risk & Dependency Management, SDLC, Requirements & User Stories, Hiring & Structured Interviewing, HAY & Dreyfus role modelling
Delivery Tooling	Jira, Confluence, Asana, ServiceNow, Azure DevOps, GitHub (Actions / Pipelines), CI/CD
Cloud & Platform	Microsoft Azure (AZ-900 certified), AWS, GCP, Docker, Microservices
Engineering Background	C# / .NET (Framework, Core, 5–8), ASP.NET (MVC, Razor, Web Forms), Entity Framework, Clean Architecture, CQRS, REST / SOAP, JavaScript, MS SQL Server, PostgreSQL, Oracle
AI & Emerging	Cursor, Claude Code, Gemini, GitHub Copilot, Gordon, Antigravity
Domains	Financial Services (LSEG), Industrial Automation (Yokogawa, Siemens, ABB, WAGO, NAMUR), Logistics & GPS Tracking, ERP / Accounting

PROFESSIONAL EXPERIENCE

Independent Consultant — Delivery & Technical Advisory Jan 2025 – Present
Freelance — Bucharest, Romania

- Advising on .NET projects: finding the performance bottlenecks and saying which architectural changes are worth paying for.
- Went deep on Azure and on the current AI development tooling (Cursor, Claude Code, Gemini, Copilot). Far enough to run delivery for a team using them, not just to have opinions about them.

Software Development Coordinator (Delivery Manager & Scrum Master) Oct 2023 – Dec 2024
LSEG – London Stock Exchange Group — Bucharest, Romania

- Shipped a release every three weeks on the Scrum cadence for a global team of 15 to 20 people, with no rollbacks, owning change management from the release documentation through the GitHub pipelines to the ServiceNow approvals.
- Moved the .NET workload from AWS to Azure without taking production down. Most of that job was sequencing dependencies across teams rather than the migration itself.
- Scrum Master for the team: ran the ceremonies, kept sprint delivery lined up with the global roadmap, and reported status to senior management without dressing it up.
- Grew the local team. I designed the interview structure and ran the interviews for business analysts, testers and developers.
- *Environment:* ServiceNow · Jira · Asana · Confluence · GitHub · Azure · AWS · .NET

Lead .NET Developer Jul 2022 – Oct 2023
LSEG – London Stock Exchange Group — Bucharest, Romania

- Built the ListAPI module of a Portfolio Management platform and shipped it on time. Clean Architecture and CQRS.
- Coordinated the local developers and cleared the technical blockers that were slowing them down.
- *Environment:* C# · .NET Core · PostgreSQL · Docker · Microservices · AWS · GitHub

Software Developer Oct 2020 – Jun 2022
Qualysoft — Bucharest, Romania

- Coordinated the implementation of one of the GPS tracking solution's modules.
- Supported and guided the team on improving its implementation and delivery processes.
- *Environment:* C# · ASP.NET (Web Forms, MVC) · JavaScript · SQL Server · Entity Framework · Git

Software Development Team Coordinator Jan 2019 – Apr 2020
Yokogawa — Bucharest, Romania

- Started the software team from nothing: wrote the role profiles on the HAY and Dreyfus models, ran the hiring, set up Azure DevOps and the CI/CD pipelines.
- Introduced Agile to stakeholders who had never worked that way, then wrote down the workflows, procedures and communication standards so it would outlast me.
- Gathered requirements, wrote the user stories, ran sprint planning and reported status to stakeholders.
- *Environment:* Azure DevOps · C# · ASP.NET MVC 5 · Entity Framework 6 · SQL Server

Software Engineer Mar 2018 – Sep 2018
ORTEC – Optimize Your World — Bucharest, Romania

- Maintained and extended a C# / ASP.NET integration sitting on top of Exact Synergy, and wrote the functional specifications for what existed and what was planned.

Lead Software Developer Aug 2011 – Jun 2017
Yokogawa — Bucharest, Romania

- Agreed cross-company data-transfer standards with Siemens, WAGO and ABB. The target was cutting the effort to migrate an industrial automation project between platforms by 80%.
- Ran Yokogawa's technical booth and workshops at the NAMUR Global Assembly in 2016, in front of more than 500 attendees, demonstrating live data transfer between Yokogawa, Evonik and WAGO systems against the NE148 and NE150 recommendations.
- Built the NAMUR Modular Production prototype (NE148, MTP) and integrated it into Yokogawa's Centum VP control system. Later co-developed a digital platform for project delivery inside Yokogawa.
- Built the logging, validation and reporting tools that sat on Yokogawa ADSuite and took the manual work out of change tracking.
- Did the business analysis with Evonik, WAGO and ABB, and travelled to Japan, the Netherlands and Germany for the analysis meetings and the presentations.
- Ran code reviews and sprint estimation, wrote the QA procedures, mentored the juniors.

- *Environment:* C# · ASP.NET (MVC, Razor, Web Forms) · WCF · Entity Framework · Kendo UI · SQL Server · SVN

EARLIER EXPERIENCE

Software Developer — *INTRAROM S.A.* Jul 2010 – Jul 2011
BOM management, barcode labelling and defect-tracking system for internal production; SharePoint intranet with Active Directory synchronisation.

Facilitator (part-time) — *Ascendis* Jan 2010 – Jan 2015
Facilitated corporate team-building and conference events for professional audiences, combining experiential learning with structured debriefing.

Software Developer — *CIEL Romania* Feb 2010 – Jul 2010
Accounting software modules on MVP architecture; business-flow analysis driving UI design.

Software Developer — *INTRAROM S.A.* Aug 2007 – Feb 2010
Large-scale Windows Mobile application for the national railway company (Compact Framework, CAB, Entity Framework).

Software Developer — *Lemonbyte (outsourced to PNMsoft)* Mar 2007 – Aug 2007
Migrated BPM platform modules from ASP/VB to C#/ASP.NET; built a Windows Workflow Foundation transformation engine.

Junior Software Developer — *Axes Software* Nov 2006 – Feb 2007
Reporting Services tool, warehouse management modules and wireless LAN configuration.

QA Tester — *Gameloft* Dec 2005 – Oct 2006
Tested mobile game titles and authored technical documentation across multiple published products.

EDUCATION

Master's Degree, Economic Informatics — Romanian-American University Sep 2000 – Jun 2005
High School Diploma, Informatics — Emil Botta Theoretical Highschool 1996 – 2000

CERTIFICATIONS

- Microsoft Certified: Azure Fundamentals (AZ-900)
- EITC/CP/PPF — Computer Programming Fundamentals
- Contributing to the Psychological Safety of the Team
